

# Intuity<sup>®</sup>

## Benching

Many organisations are faced with the task of optimising the footprint without overcrowding. At the same time, there is a drive to embed collaboration and creativity throughout, while still offering space for individual work. Intuity makes it easy to design an inspiring, engaging environment that gives people places to think and work independently, but also encourages collaboration.

## A Simple Solution

Part of Haworth's Integrated Palette™, Intuity is a simple solution to the complex challenge of supporting the always evolving needs of people, technology, and workstyles within a workplace. Intuity can help create a dynamic environment of spaces that allow for both individual work and collaboration—even in smaller footprints. Easy to specify and install, Intuity consists of a modular kit of parts to optimize space and allow easy expansion for growth.

## Features

Every Intuity benching application begins with a starter kit that includes the basics for creating one single- or double-sided unit (worksurfaces are specified separately).

**Simple modular kit of parts** – Creates a variety of space-saving configurations that can be easily installed to support diverse workstyles and adapted to accommodate changing needs.

**Add-on kits** – Allow quick, easy bench extension and additional configurations to support change and growth.

**Rectangular and 120-degree worksurfaces** – Expand your configuration options and create an engaging, organic environment, while maintaining a simple kit of parts.

**Optional split, full-access hatch** – Allows access to power and data at the rear of the worksurface when needed, and stays flush with the worksurface when not in use.

**Steel leg design** – Available in angled or straight profiles to complement any space.

## Colors, Materials, Finishes

Work surfaces are offered in laminate and wood options to create engaging, comfortable spaces. Steel legs are available in a variety of paint colors to match your environment. Screens can be specified in fabric, markerboard, laminate, wood, and glass for a unique aesthetic and to provide a level of privacy.
