

Swopper

Active seating

The Swopper supports and encourages movement and frequent changes of sitting position. The 3D technology gives you flexible sideways motion, extends your reach and ensures an optimum sitting posture in relation to your working surface.

The Swopper helps strengthen back and core muscles, and the vertical movement stimulates blood circulation and oxygen flow. The Swopper can be adjusted to suit individual users with easy settings to ensure you keep an optimum angle between your hips and knees.
