

Park Pods by PLN Group

Separation without isolation

Park is designed to form ‘touch-down’ work units that utilise space in the most economical way while still providing a comfortable experience for the user.

The dynamic curved shape is visually appealing while providing maximum space and comfort for each occupant. Units are designed to nest snugly and it’s nature-inspired, biophilic design principals can contribute to resilience from stress in the workplace.

The soft upholstered sides absorb sound and create a quieter, calmer work environment where the user can ‘park’ for a short drop in. It is ideal for short periods of focused work away from the workstation in an open plan environment – which leads to increased engagement and productivity.

Connectivity – clean and integrated cable management for all connections and devices. USB, power, data, HDMI. Quick install, plug in, relocate

Available in two formats. The Park Move is on castors, making it easy to move around the office or the Park Connect is on gliders, a more static placement.

Lightweight, touch-down workspace using materials with acoustics properties which work to minimise distractions and dampen noise

The Park pod is a cost-effective, flexible alternative to permanent meeting or quiet rooms.

Dimensions

PARK MOVE

1200mm H
1315mm W
1020mm D
720mm H - Desk height

PARK CONNECT - SINGLE

1200mm H
1315mm W
1040mm D
